DOWNLOAD.EXE -

    This program downloads a file to the CSA907. The file
should be made up of 1's and 0's. You can use any editor you
want. You may separate each value with a space, comma,
carriage-return, or any combination them. Or, you can pack all
the bits together. Type download at the DOS prompt to see the
required input-format.

    I noticed an error-rate when using my "PATTERN"
pattern. It turns out that I made up the file from similar
blocks (cut-and-paste) and then altered a few bits. The
error-rate may only go to zero on "PATTERN" if the CSA907's WORD-SYNC
menu is changed from 1 (low) to 9 (high). This forces the
synchronization to reset when just a few errors come in. Refer to
the CSA907 manual Appendix B for Receiver Synchronization threshold
levels.
